PROJECTS

Hotel Renting Website

- Developed a full-stack web application for listing and renting houses, designed to simplify the process of short-term rentals.
- Users can register and add rental listings with details such as location, title, description, and price per night, making it easy for potential renters to browse and select properties.
- Implemented CRUD operations for listings, user authentication, and an intuitive interface for seamless navigation.
- Technologies used: Express.js, Node.js, MongoDB, HTML, CSS, JavaScript.

Expense Management Website

- Created a web application to track and manage personal and shared expenses, providing a transparent view of expenditures.
- Developed specifically for group usage, allowing users to add and categorize expenses, calculate individual contributions, and monitor shared costs – widely used among PG mates.
- Features include expense categorization, real-time updates, and an easy-to-read summary for expense tracking and budgeting.
- Technologies used: MERN Stack (MongoDB, Express.js, React.js, Node.js).

ACHIEVEMENTS

- Solved 180 problems on LeetCode, strengthening skills in Data Structures and Algorithms:
- 🌐 https://leetcode.com/u/Ebrahim7/
- Participated in hackathons with a project focused on reducing vehicle pollution in India
